Managing Motivation

Trimester 2.2025

Motivation

The Motivation Process

Unsatisfied need → Drive toward goal to satisfy need → Attainment of goal (need satisfaction)

Motivation

- **Sources:**
  1. **Intrinsic:** individual experiences fulfillment through carrying out an activity itself and helping others
  2. **Extrinsic:** external environment and result of the activity in the form of competition and compensation or incentive plans are of greater importance

Intrinsic vs. Extrinsic Motivation

Intrinsic	**Extrinsic**
Behaviour motivated by intrinsic factors such as self-expression, interest and enjoyment	*Behaviour motivated by extrinsic factors such as the promise of reward or threat of punishment*
Motivated to finish reading because you are interested	Motivated to finish reading to meet a deadline
Working because you find the job stimulating and enjoyable	Working because you need the money
Changing jobs because you want the challenge	Changing jobs because you are certain you will be fired
Motivated to work in difficult jobs that challenge you	Motivated to work in difficult jobs to get a pay rise
Studying to improve yourself	Studying to get a high-paying job

The Assumption of Content and Process

- **Content theories**
  - explain work motivation in terms of **what** energizes, directs, sustains, and stops behavior
  - specific needs that motivate people
- **Process theories**
  - explain work motivation by **how** individual behavior is energized, directed, maintained, and stopped

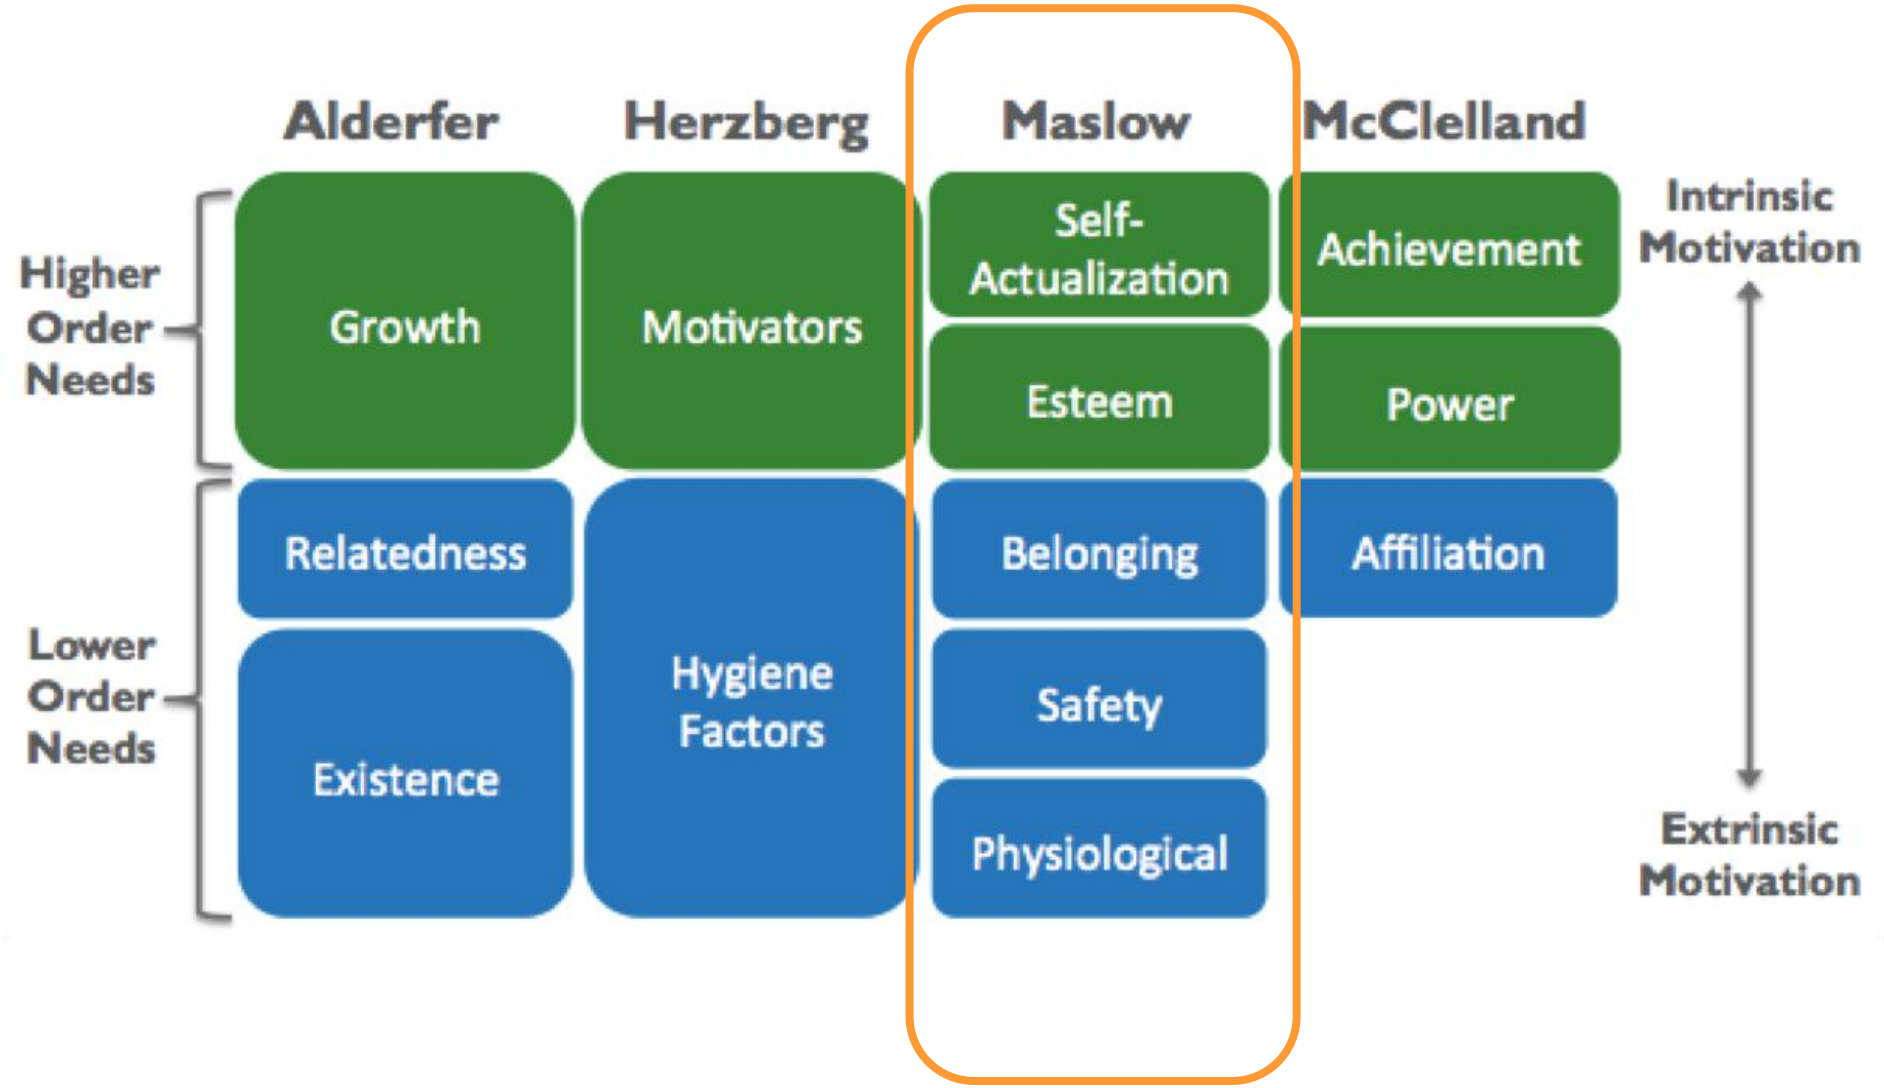
- **Content theories**

1. Hierarchy of needs (Maslow)
2. ERG theory (Alderfer)
3. Two-factor theory (Herzberg)
4. Needs theory (McClelland)

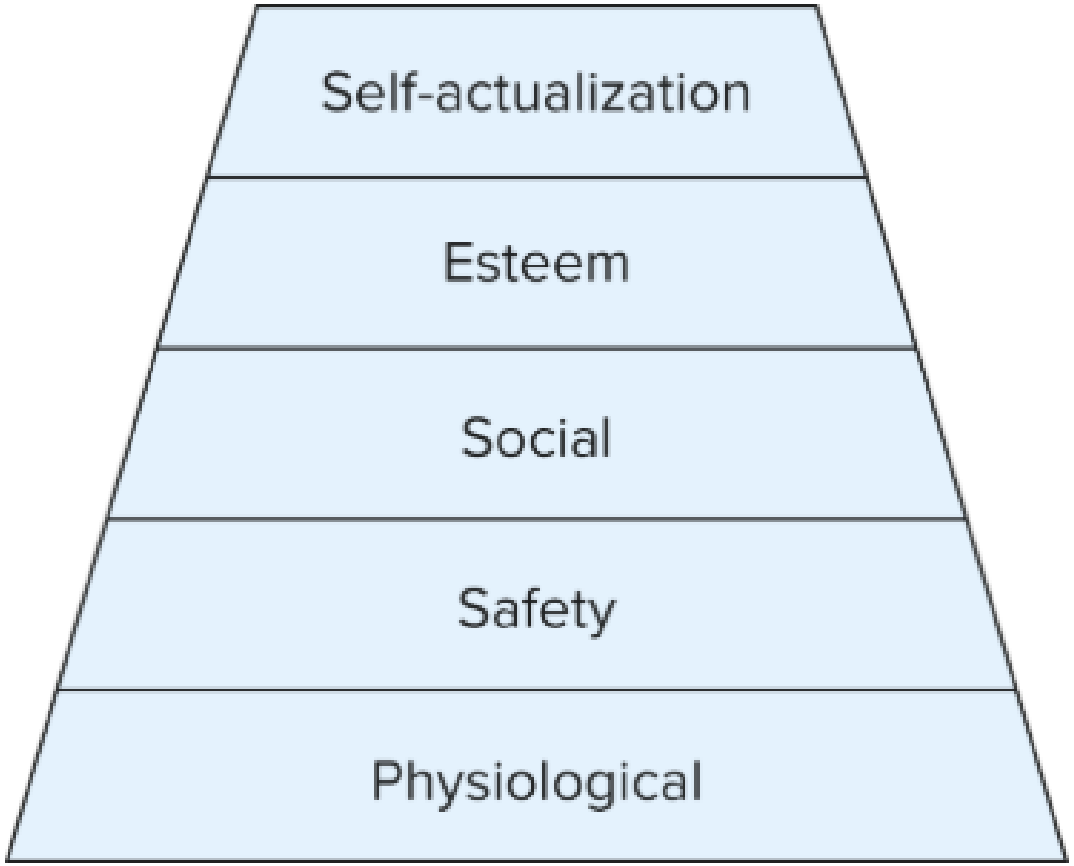
- **Process theories**

1. Expectancy theory (Vroom)
2. Equity theory (Adams)
3. Goal Setting theory (Locke)
4. Exchange theory (Homans)

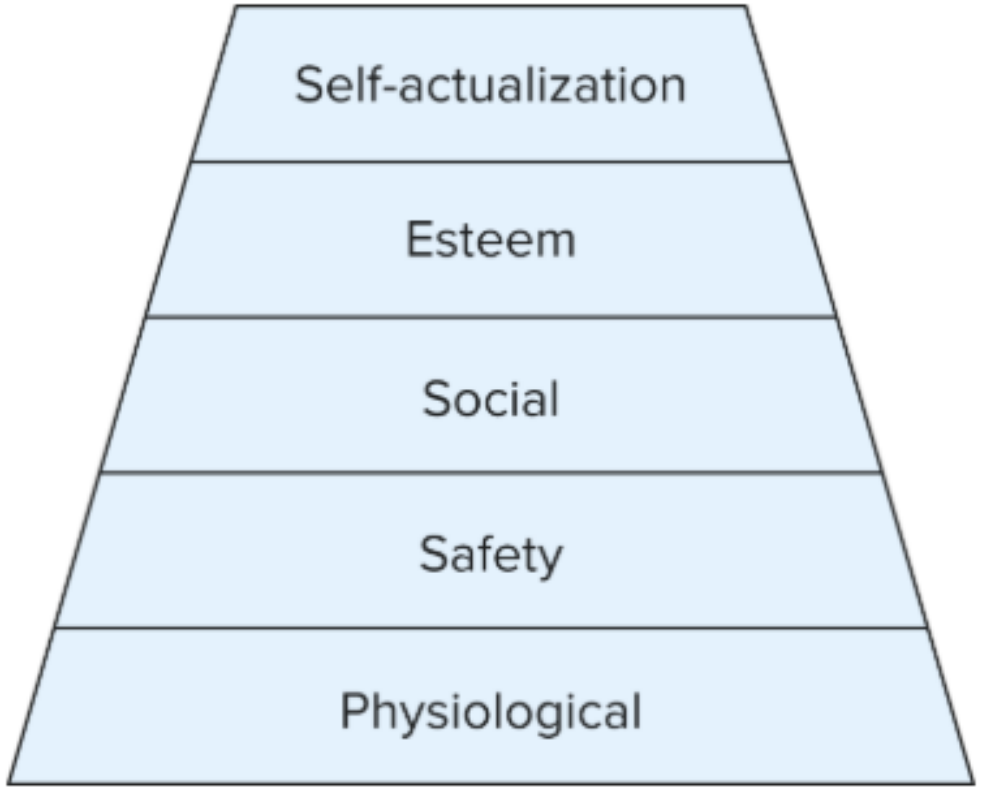
Comparison of Content Theories



Hierarchy of Needs
(Abraham Maslow)



Hierarchy of Needs



Fulfill oneself through abilities, skills, & potential

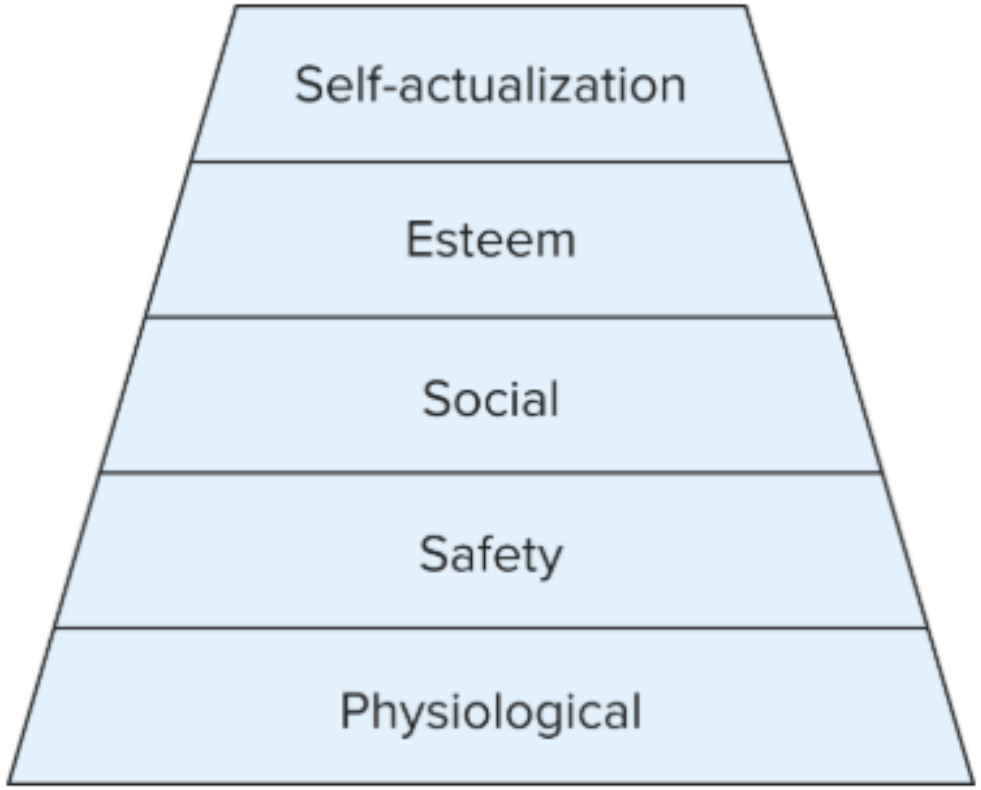
Self-esteem, esteem from others

Friendship, affiliation, interaction, love

Security, stability, absence of pain

Food, drink, shelter

Hierarchy of Needs: Management Implications

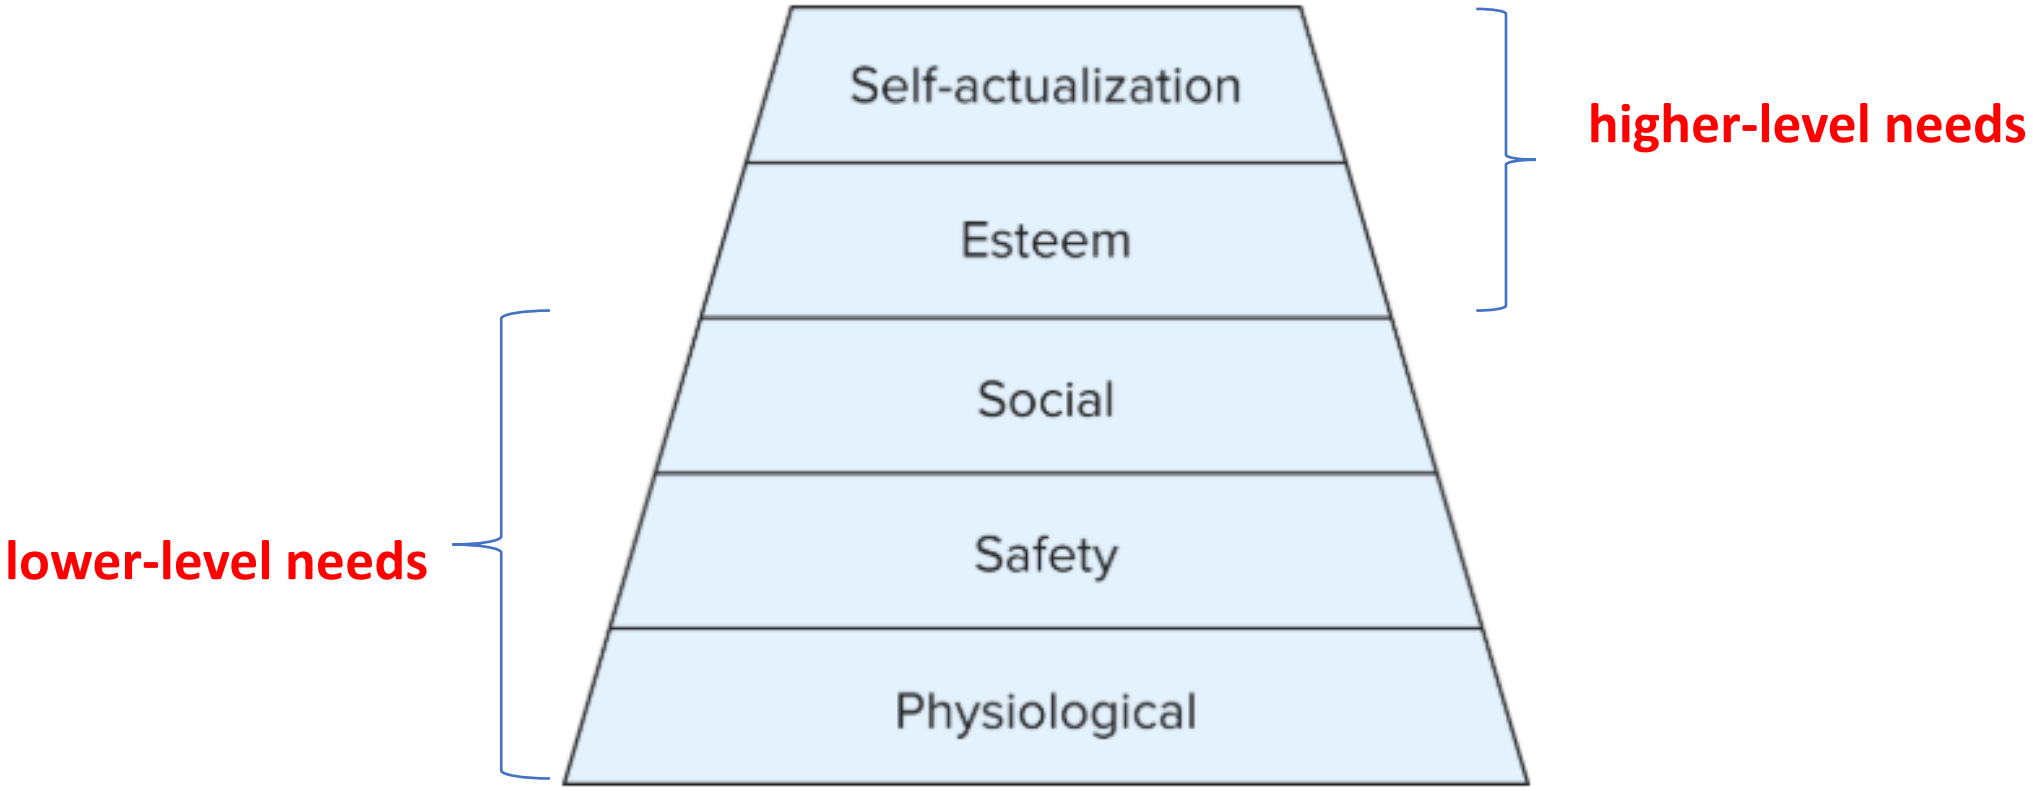


Hierarchy of Needs

Assumptions

1. A satisfied need ceases to motivate
2. Unsatisfied needs can lead to undesirable performance outcomes.
3. People have a need to grow and develop. People will strive to move up the hierarchy in terms of need satisfaction.

Hierarchy of Needs

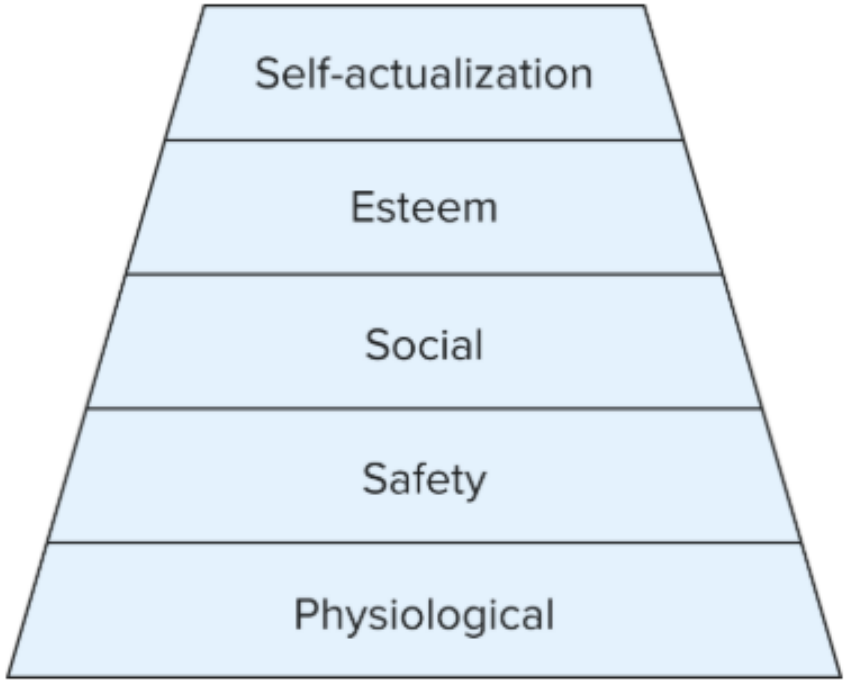


Exercise: Hierarchy of Needs

Scenario 1

You are the manager of a product development team. Your team includes:

- Mina enjoys receiving public recognition for her contributions and often volunteers to present the team's work.
- Ravi thrives when given challenging goals. He is ambitious and wants to be promoted quickly.
- Jasper is motivated by bonuses and performance-based rewards. He tracks his call resolution metrics closely.

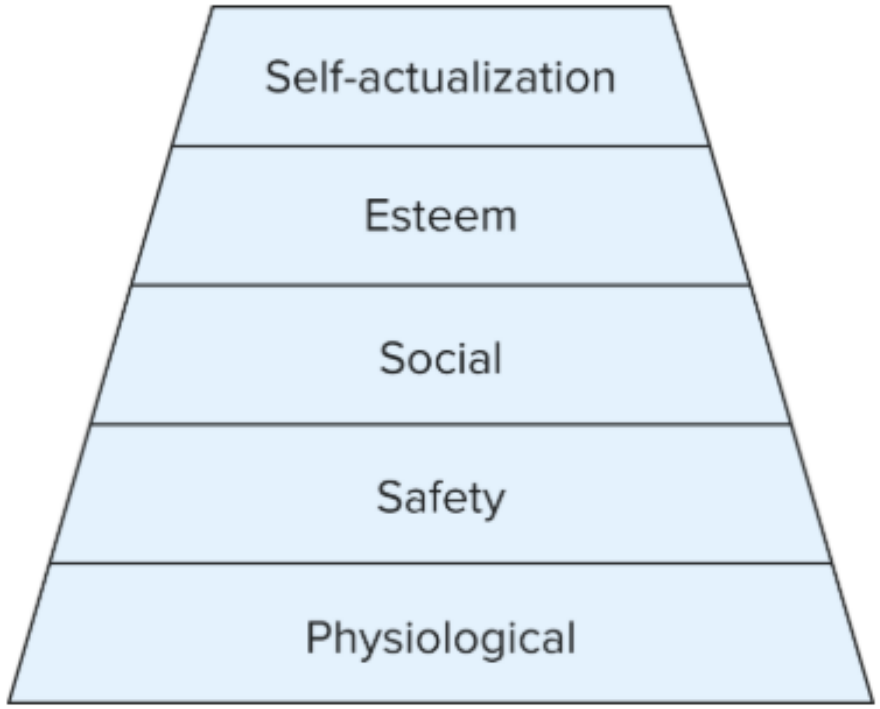


Exercise: Hierarchy of Needs

Scenario 2

You manage a customer service team. Your team members are:

- Fatima takes pride in helping others and often mentors new staff. She is highly social and values team harmony.
- Carlos recently relocated and is supporting a young family. He is focused on earning a steady income to cover rent, food, and childcare.
- Somsri is concerned about her physical working conditions, especially safety procedures around heavy equipment. She values a predictable, hazard-free environment.



Two-Factor Theory
(Frederick Herzberg)

	The Relationship between Maslow's Need Hierarchy and Herzberg's Two-Factor Theory	
	Maslow's Need Hierarchy	**Herzberg's Two-Factor Theory**
lower-level needs	Self-actualization	Motivators
		Achievement
		Recognition
		Responsibility
	Esteem	Advancement
		The work itself
lower-level needs	Social	Hygiene factors
		Salary
		Technical supervision
	Safety	Company policies and administration
		Interpersonal relations
	Physiological	Working conditions

Two-Factor Theory
(Frederick Herzberg)

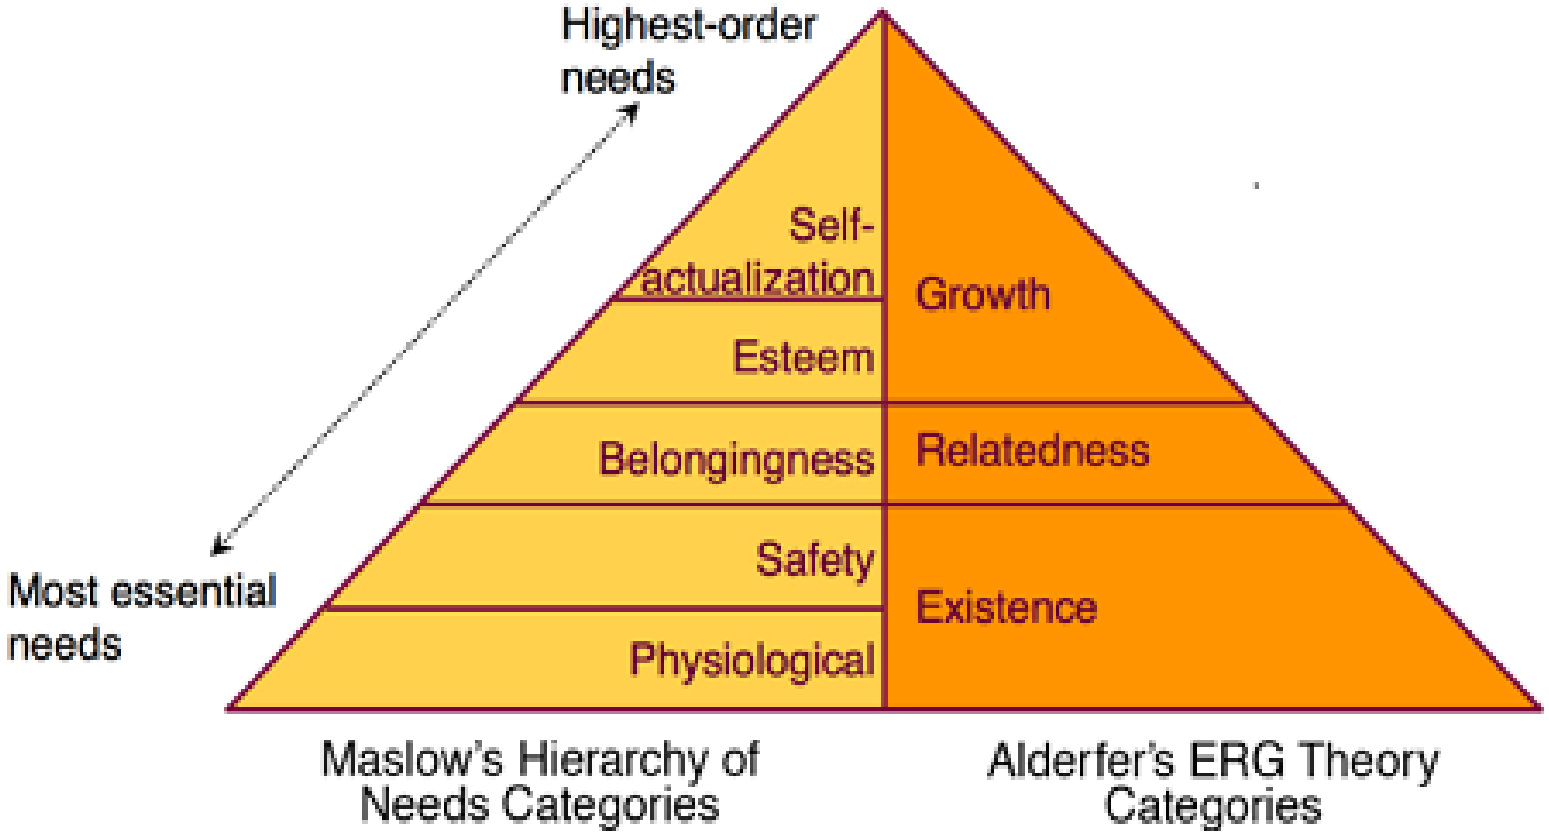
- **2 factors:**
  1. **Motivators (satisfiers)**
     - **intrinsic** conditions from **job content**
     - when present → satisfaction
     - higher-level needs
  2. **Hygiene factors (dissatisfiers)**
     - **extrinsic** conditions from the **job context**
     - when present → not dissatisfied; when absent → dissatisfied
     - lower-level needs

Two-Factor Theory

ERG Theory
(Clayton Alderfer)

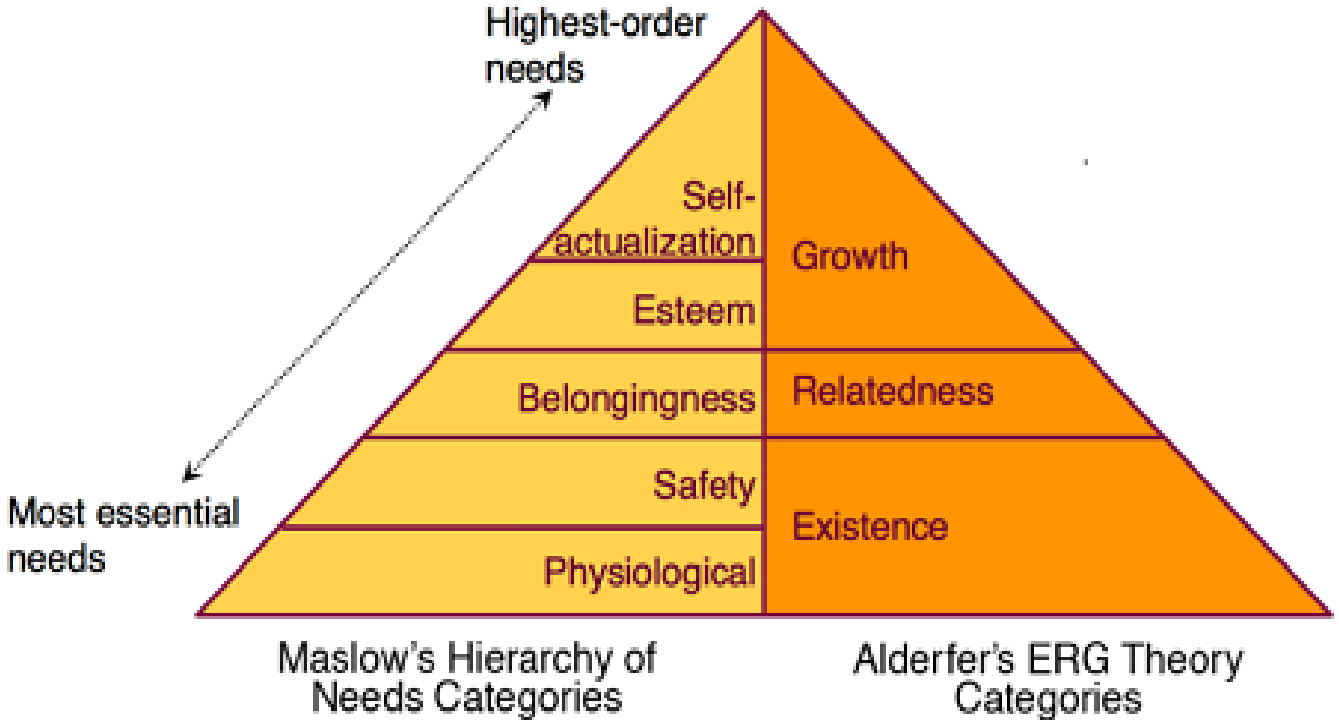
- Individuals are motivated to engage in behavior to satisfy **one** of the three sets of needs
- **3 sets of needs:**
  1. **Existence (E):** food, air, water, pay, working conditions
  2. **Relatedness (R):** meaningful social and interpersonal relationships
  3. **Growth (G):** individual making creative or productive contributions

ERG vs Maslow

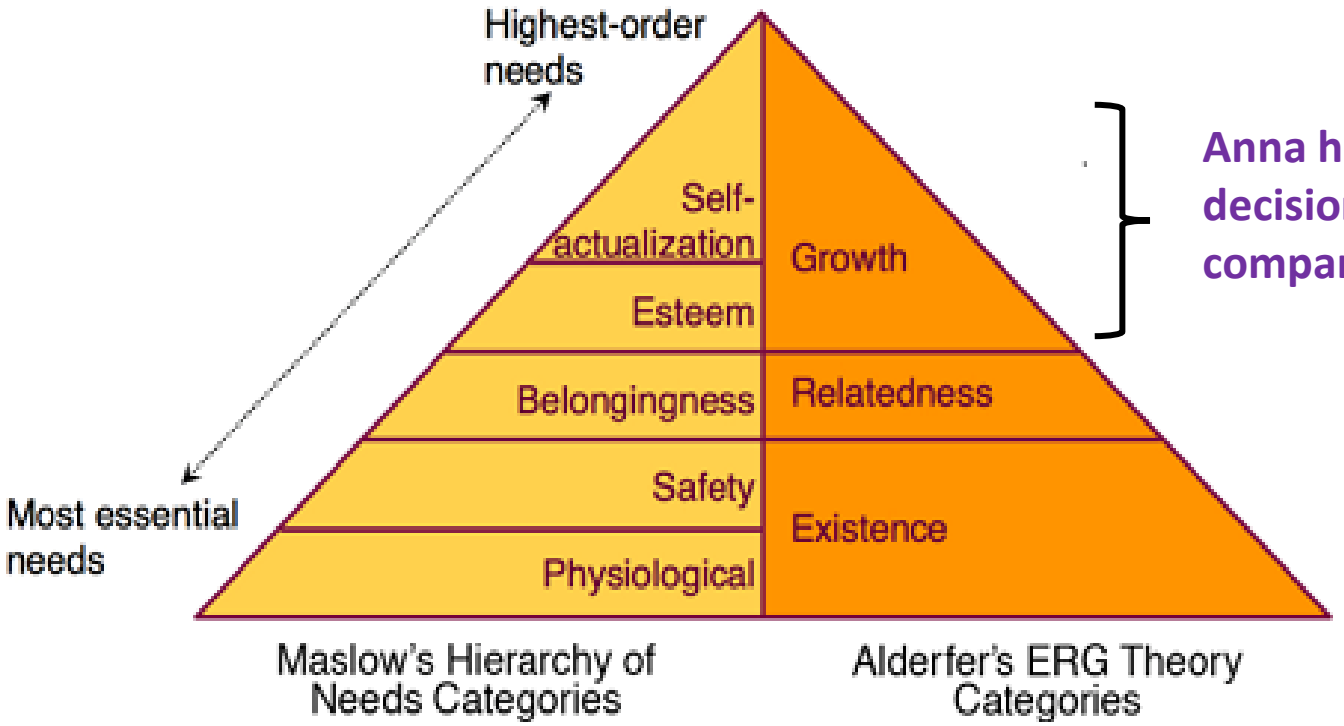


ERG Theory

- **Frustration-regression process**
  - frustrations in attempts to satisfy growth needs leads individuals to redirect efforts toward satisfying a lower-order need category (i,.e., existence & relatedness)

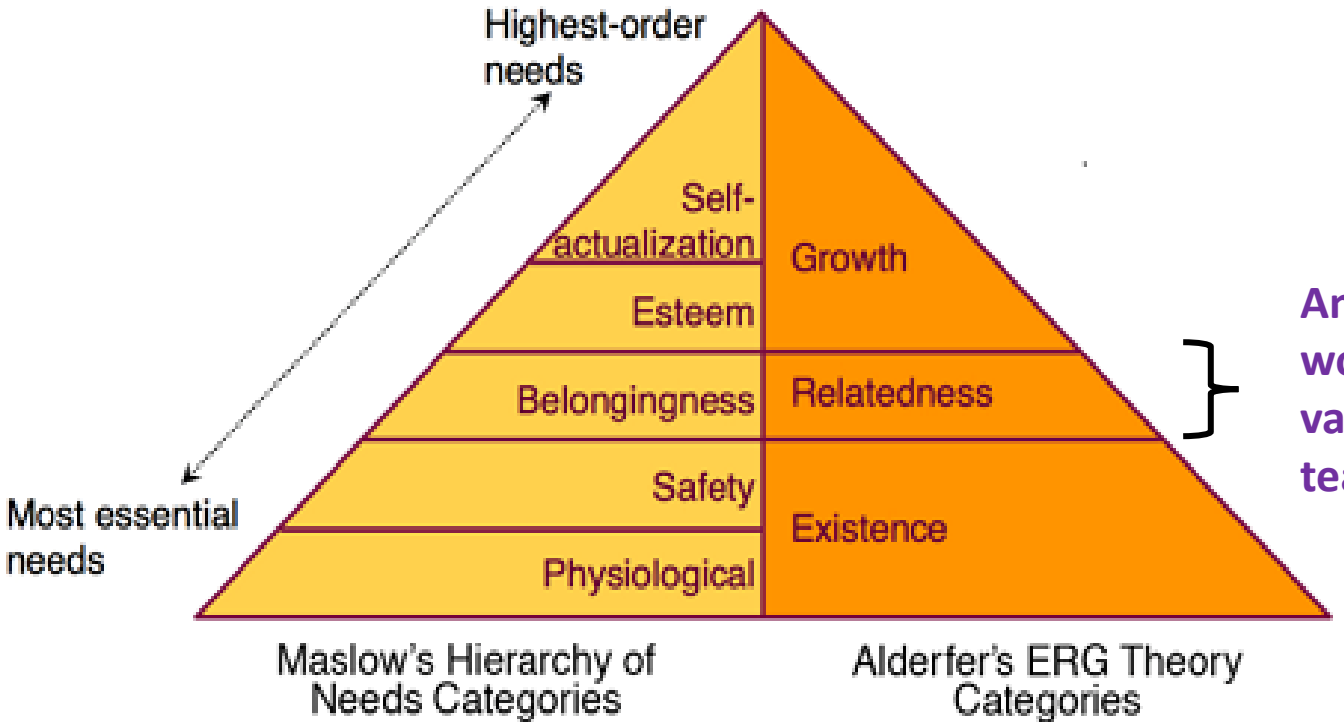


ERG Theory: Frustration-Regression Process



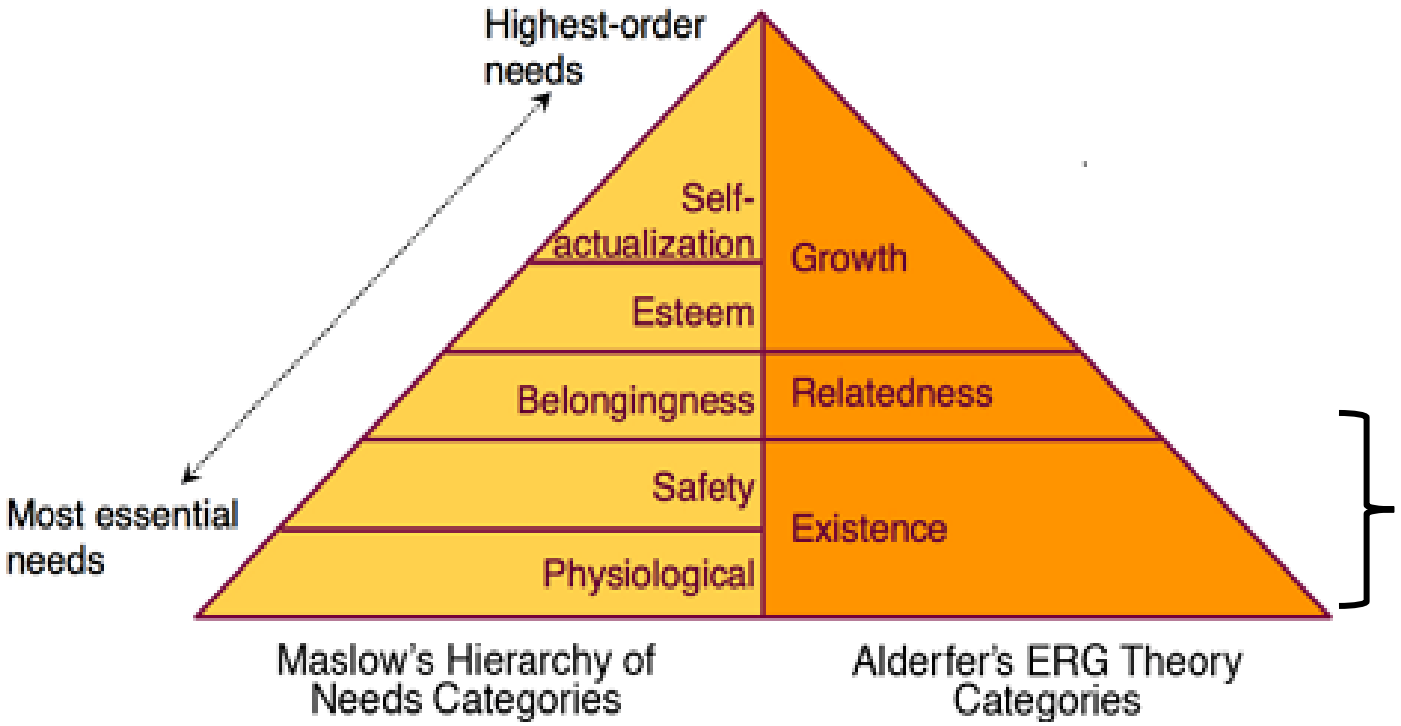
Anna has been asking for leadership training and more decision-making responsibility, but due to budget cuts, the company delays her development program.

ERG Theory: Frustration-Regression Process



Anna starts focusing more on social interactions at work — chatting more with colleagues, seeking validation from her supervisor, and wanting more team recognition.

ERG Theory: Frustration-Regression Process

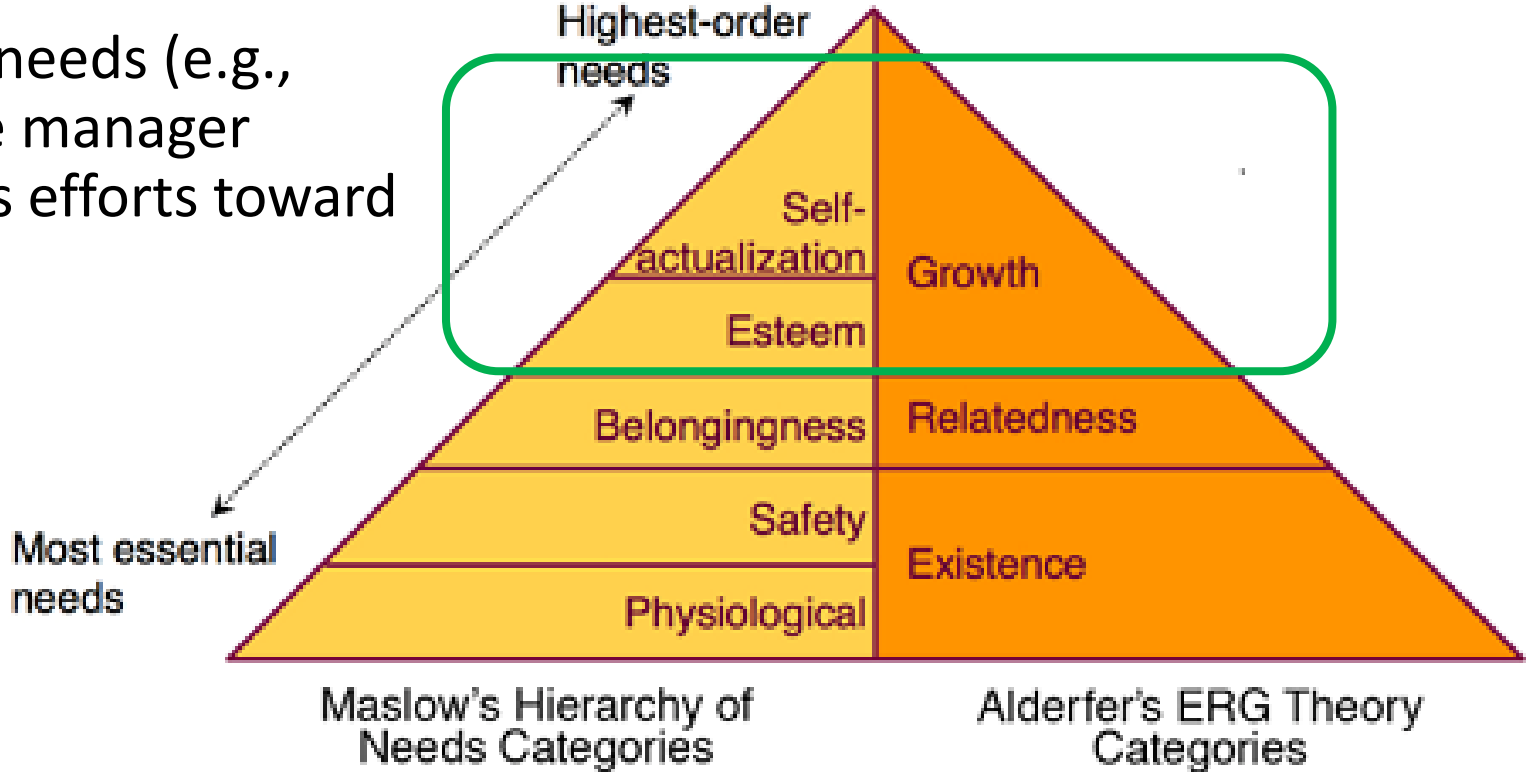


If Anna still feels undervalued and even relationships at work start to feel distant, she may regress further and focus on existence needs — asking for a raise, working overtime to secure her job, or prioritizing financial stability.

ERG Theory

- **Managerial implications**

  If an employee's higher-order needs (e.g., growth) are being blocked, the manager should redirect the employee's efforts toward *relatedness* or *existence* needs



Needs Theory
(David McClelland)

- When a need is strong in a person, its effect is to motivate the person to use behavior that leads to its satisfaction
- **3 Needs (people are typically dominant in 1 or 2 needs):**
  1. *Need for achievement:* setting and accomplishing challenging goals
  2. *Need for affiliation:* seek social connections and sense of belonging
  3. *Need for power:* desire to influence, lead and make an impact

Needs Theory: Managerial Implications

- Bella goes out of her way to keep the team atmosphere positive and cohesive.
- She dislikes competition and avoids conflict at all costs.
- She often checks in to make sure everyone is feeling included and supported.

- ✓ **Need for achievement**
- ✓ **Need for affiliation**
- ✓ **Need for power**

Needs Theory: Managerial Implications

- Steve frequently proposes new ideas and wants to lead team meetings.
- He enjoys persuading others and influencing the project direction.
- He is assertive and confident in voicing his opinions to senior leaders.

✓ **Need for achievement**
✓ **Need for affiliation**
✓ **Need for power**
