

The image shows a laptop and a tablet on a desk. The laptop screen displays a software interface with a table titled 'Fundraiser Results by Salesperson' and a pie chart. The table lists participants and units sold. The pie chart shows the distribution of units sold among the participants. A text box is overlaid on the image with a quote.

“Information is the oil of the 21st century, and analytics is the combustion engine.”

Peter Sondergaard, Gartner Research

The image shows a dark, stormy landscape with a lightning bolt striking a field. The text is overlaid on the image.

The ability to take data - to be able to **understand** it, to **process** it, to **extract value** from it, to **visualize** it, to **communicate** it is going to be a hugely important skill in the next decades.

Hal Varian, Chief Economist, Google

MARKETING DATA & INFORMATION

Assoc.Prof.Dr. Apiradee Wongkitrungrueng

NIKE MIND: MENTAL READINESS & FOCUS

1. THE PROBLEM (SITUATION)

Modern athletes face constant mental strain & distraction.

Mental health is a priority.

2. THE SOLUTION (NIKE MIND)

Neuroscience-backed footwear & tools designed to promote calm, presence, and mental clarity.

3. THE PRODUCT & ACTION (MARKETING)

Footwear with specific sensory design elements and digital tools to aid mental focus.

"Mind Sets" campaign.

4. THE OUTCOME & VALUE (VALUE CREATION)

Improved focus, reduced stress, better performance.

The athlete is mentally prepared.

Value = Mental Wellbeing + Performance.

EVERYDAY INDULGENCE & THE EVOLUTION OF THAI TEA

(CHAI TRA MUE CASE STUDY)

1. TREND: EVERYDAY INDULGENCE (HEALING THE SOUL)

- Micro-moments of joy to cope with daily pressure.
- Shift from **FUNCTIONAL DRINK** (Coffee for alertness) to **EMOTIONAL DRINK** (Thai Tea for relaxation).

Grab-moment of insight data:

Grab 2025 Data: Thai Tea Orders > Americano

2. CONSUMER INSIGHT: GUILT-FREE INDULGENCE

3. CHAI TRA MUE CASE STUDY: ADAPTING TO CLEAN LABEL

RESULT: Maintain leadership, unlock export markets, ensure sustainability.

The Role of Marketing Information

**NOTHING SUCKS
LIKE AN ELECTROLUX**

The most powerful vacs you can buy are in the new 2000 series.

Returns on marketing actions

- 60-90% of new products fail
- 15-30% of advertising has no effect
- 85% of price promotion lost money

If firms lack information and do not understand their marketing environment

Easy marketing that turns disloyal customers into loyal customers

Personalized promotion

Existing Starbucks Site Analysis

1. Population Density of 15 to 44 Years Old (Figure 1)

The majority of existing Starbucks stores falls into relatively populated areas population of 1107 or more, but not necessarily in the most populated area. Two site located in less populated areas in the north.

New store location

New product

30 PACKETS PUMPKIN SPICE LATTE

Using weather data to drive sales

Starbucks sent a simple email promoting hot drinks to customers who are experiencing cold weather.

With no incentive/offer, Starbucks saw large incremental sales vs. control group and emails had above average open rate – suggesting high relevance

Dynamic Menu and Digital menuboard

Starbucks Isn't a Coffee Business — It's a Data Tech Company | by Was Rahman | Marker (medium.com)

Definition

- **Data** is the raw, unprocessed fact. On its own, data has no meaning.
 - Data can take many forms—numbers, images, audio clips, transcriptions, and more.
 - **Example (retail transaction data):** customer ID, SKUs purchased, total amount spent, time of purchase, store location, payment method. The scanner records a sale: '1 bag of chips, 12:00 PM, Sunday.
- **Information** is data that has been processed, aggregated, and organized into a human-friendly format—so we can interpret it and assign meaning.
 - Information is often communicated through **reports, dashboards, and data visualizations**.
 - **Example:** every Sunday around noon in the fall, sales spike—especially for items like soda, cheese, salsa, and chips.
- **Insight** comes from analyzing information and drawing conclusions about *why* something is happening. Insights help decision-makers choose better actions.
 - **Example (insight):** Sales peak every Sunday at noon during the fall because customers are preparing for the televised NFL football games. Some *are in a hurry* and afraid of missing the kickoff. They usually buy chips, dip, and soda together—so making it fast and easy is the key.
 - **Example (actionable implication):** Run a “Game Day Bundle” (chips + salsa + soda), cross-merchandise near the entrance, and schedule extra staff for the pre-game rush.
- **Research** involves the collection, organization, and analysis of data/information in order to establish facts to gain understanding situations and reach new insights.
 - **Example:** A retailer tests whether “Game Day Bundles” increase basket size by running an **A/B test** for 4 Sundays (some stores offer the bundle + front-door display; others do not), then compares average basket value and snack-category sales between groups to determine the causal effect.

Sources of Marketing Data

1

Internal databases (regular, ongoing)

- Electronic collections of consumer and market information obtained from data sources within the company network.
- Pro: Quickly accessed and cheaply than other sources
- Con: Incomplete. Don't know what's going on *outside the firm?*

2

Market Intelligence (regular, ongoing)

- The systematic collection and analysis of publicly available information about consumers, competitors, and general marketing environment, enabling quick respond to problem/opportunity
 - Track consumer trends, consumer conversation about the company, brand, competitor
 - Track competitors' actions, strategies, new product, promotions
 - Regularly visit retail store, feedback from salesperson

3

Marketing research (specific question, specific time)

- The process of defining a marketing problem/opportunity, systematically design, collect, analyze information, and recommend actions to improve a specific marketing situation.

① Internal databases

Information in the database can come from many sources

Function	Information
Marketing	Customer demographics, sales transaction, buying behaviors, visit frequency, campaign results
Customer service	Customer satisfaction, service problems
Accounting	Financial statement, records of sales, costs, cash flow
Operation	Product schedules, shipments, inventories, quality
Sales force	Reseller reactions, competitor activities
Channel	Point-of-sale transactions

Harnessing such information can provide powerful customer insights and competitive advantage

Netflix – consumer behavior

- more than 100 million subscribers around the world who generate an extraordinary amount of data to analyze
 - Past data: customer ID, movie ID, rating, the date the movie was watched
 - Now:
 - When and where you watch content
 - What device you use to watch
 - The ratings given (about 4 million per day)
 - Searches (about 3 million per day)
 - Browsing and scrolling behavior
 - When you rewind, or fast forward
 - When you pause and leave content (and if you ever come back)
 - Data within movies. They take various “screen shots” to learn about movie characteristics (volume, scenery) that help Netflix find out what users like.

Source: <https://marionoioso.com/2019/01/03/how-netflix-uses-data-to-drive-success/>

Sources of Marketing Data

1

Internal databases (regular, ongoing)

- Electronic collections of consumer and market information obtained from data sources within the company network.
- Pro: Quickly accessed and cheaply than other sources

Internet as a source of consumer insights

- Second life
 - Spend many hours each day to communicate, entertain, learn/work, shop
 - Customer journey involves the use of search engine and social media
 - Consumers' views, tastes, emotional reactions are available to the public through **Search data and Social data**
- Internet research addresses the limitations of traditional market research
 - Real-time insights, avoid bias
 - Large-scale, high-quality data: billions of users tweeting and posting what they think and feel every day

Leading online sources where consumers worldwide search for products in 2023

Source: <https://www.statista.com/statistics/1034209/global-product-search-online-sources/>

Samsung hired [Networked Insights](#), to do deep analysis of customers' likes and dislikes using massive amounts of data aggregated online to identify both what people are saying about the brands and their rivals' products, to find weak spots that they could outperform Apple.

iPhone 5 Early Buyers: "What one thing would you add to or change about the iPhone?"

1. Longer battery life
2. Improve built-in Maps
3. Bigger screen
4. Unhappy with switch to Lightning
5. Ability to customize the look and function of phone
6. Improve Siri functionality
7. More durable/less fragile

Source: <https://9to5mac.com/2014/04/07/early-iphone-5-buyers-were-asking-for-bigger-screens-even-in-early-2013/>

Unhappy iPhone-carrying travelers sitting on airport floors, hunched around wall outlets, waiting for their handsets to charge. They should've bought the Samsung Galaxy S5 with ultra power-saving mode and interchangeable battery.

T • TikTok: Browse for surprises

Your first tool — before you have a keyword. Open-scan a category, let the signals surface.

1

Search the CATEGORY, not a behaviour

Type: ร้านกาแฟ, แฟชั่น, สัตว์เลี้ยง, โรงแรม

Not: 'café Wi-Fi trend' or 'pet anxiety'

Scroll 20-30 videos without judgment. You are window shopping, not shopping.

3

Mine the comments — this is where gaps live

Read comments on the 2-3 most engaging videos you found.
Look for: 'I wish there was...', 'why doesn't anyone make...',
'where can I find...'

These are unmet need signals. Screenshot them.

2

Watch for three signals

Unusual engagement: low-quality video, high views = topic resonates

Repeated topic: appears across different creators + different weeks

Comment surprise: viewers asking for something that doesn't exist yet

4

Write the surprise as a behaviour sentence

'People are doing X instead of Y' or 'People want X but can only find Y'

If you can only write one word — you have a topic not a trend.

Keep scrolling.

The sentence test is your quality check.

What you are NOT doing: validating a hypothesis you already have. That comes later with Google Trends.

Search data

- Google Trends provides aggregated search data, giving you insight into a product, brand, and competitive landscape across time
- Google Trends can reveal the queries people also search for when they search for your term.
- You can find current trending topics from the past 24 hours that the public is talking about

Source: <https://www.ionos.com/digitalguide/online-marketing/search-engine-marketing/micro-moments/>

Web Search

Suggest search terms

what pet parents are doing more/differently than before

Find search terms

Related suggestions

Compare Pet insurance and Pet technology

Gemini in Google Trends is an experimental AI feature. [Learn more](#)

New in 2026

Type a broad description in natural language — 'what are people searching about in pet wellness' — Gemini suggests related terms. Solves the circular keyword problem.

Compare up to 8 terms simultaneously (was 5). Use this to see which related behaviour is growing fastest across your category.

Interest over time ⓘ

Thailand · Past year

The relative popularity is the ratio of a query's search volume to the sum of the search volumes of all possible queries. The resulting numbers then get scaled on a range of 0 to 100, the time when the product or service was most popular.

Average interest ⓘ

Thailand · Past year

Search terms and Topics are both included but they're measured in different ways. [Learn more](#)

Rising line

TREND

Growing steadily over 2-3+ years.
Something is shifting in behaviour.
E.g. 'pet anxiety Thailand' rising = real shift

Spike + drop

VIRAL MOMENT

Sharp peak, returns to baseline.
One creator or news event — not a trend.
Common student mistake: treating spikes as trends

Flat line →

STABLE CATEGORY

Always been this level.
Not a trend — just a category.
'Dog food Thailand' probably flat for years

✓ Pet insurance

pet technology

pet supplements

dog daycare

pet tracker

pet memorial

Canine Professional

Raw Pet Foods

People who searched for **Pet insurance** also searched for these queries

Top queries ⓘ

Thailand · Past year

Query	Search interest ⓘ	Change ⓘ
1 pet insurance		↑ +60% ⋮
2 ประกัน สัตว์ เลี้ยง		↓ -30% ⋮
3 best pet insurance companies		BREAKOUT ⋮
4 กิพย ประกันภัย สัตว์ เลี้ยง		↑ +20% ⋮
5 กิพย ประกันภัย		↓ -20% ⋮

Rising queries ⓘ

Thailand · Past year

Query	Search interest ⓘ	Change ⓘ
1 best pet insurance companies		BREAKOUT ⋮
2 pet friend insurance		BREAKOUT ⋮
3 pet insurance		↑ +60% ⋮
4 กิพย ประกันภัย สัตว์ เลี้ยง		↑ +20% ⋮
5 กิพย ประกันภัย		↓ -20% ⋮

Related Queries — Rising tab — the most useful feature for trend discovery. This surfaces topics climbing in interest fastest alongside your main term. It helps you move from a broad category to a specific behaviour without guessing the keyword first. This is where you find pet anxiety from pet.

Reading Google Trends results: the full guide

Including when it shows nothing — which is itself a finding

High score, stable line

Established category — always been popular

→ **Late to market. Competitors already there. Hard to differentiate.**

High score, rising line

Growing trend, still scaling

→ **Opportunity exists but competitors likely already moving. Act fast.**

Suggested in Related Queries,
no score

EMERGING — below reporting threshold but
real

→ **Early mover advantage. The problem exists. The solution doesn't yet.**

Breakout label (+5000%)

Explosive recent growth

→ **Verify if sustained or viral. Check the shape over 4+ weeks before acting.**

No data at all

Too niche, wrong language, or Thai volume
too low

→ **Switch to TikTok + Wisersight as primary. Google Trends has a floor.**

Sources of Marketing Data/Information

1

Internal databases (regular, ongoing)

- Electronic collections of consumer and market information obtained from data sources within the company network. Quickly accessed and cheaply than other sources BUT incomplete

2

Marketing Intelligence (regular, ongoing)

- The systematic collection and analysis of publicly available information about consumers, competitors, and general marketing environment, enabling quick respond to problem/opportunity
 - Track consumer trends, consumer conversation about the company, brand, competitor
 - Track competitors' actions, strategies, new product, promotions
 - Regularly visit retail store, feedback from salesperson

3

Marketing research (specific question, specific time)

- The process of defining a marketing problem/opportunity, systematically design, collect, analyze information, and recommend actions to improve a specific marketing situation.

Marketing research

formal studies that provide customer and market insights for specific marketing situations and decisions.

3

- **Market**
 - Market size/share/growth
 - Identify market segments
 - Estimate the demand for new product

Common research topics

- **Product**
 - Product development
 - Concept
 - Attribute, feature
 - Optimal price points
 - Product test

- **Consumer Insight**
 - Motivation (interest → actual purchase)
 - Attitudes toward product, brand, advertisement
- **Behavior**
 - Usage (how, when, where the product is used)
 - Shopping behavior
- **Satisfaction**

Film industry case study

- Not every movie has favorable results like *Avengers*, *Avatar*, and *Titanic*. So what can studios do to try to reduce the risk that a movie will be a box-office flop?
 - **Concept testing:** assess early ideas for proposed new films to ensure that the sequels are consistent with expectations created by the past movies
 - **Title testing-** a form of research to select the right name.
 - *3000* became *Pretty Woman* because the original title sounded too futuristic.
 - **Test (or preview) screenings.** 300-400 prospective moviegoers are recruited to attend a “sneak preview” of a film before its release. After viewing the movie, the audience completes a survey to critique its title, plot, characters, music, and ending to identify improvements to make in the final edit. John Cameron used a test screening to convince 20th Century Fox of *Avatar*’s potential appeal.
 - **Tracking studies:** before an upcoming film’s release studios ask potential moviegoers about their awareness, interest, and visit intention? and observe film mentions in the SNSs to monitor promotional campaign, forecast revenues, and adjust marketing efforts.

Marketing Research Process

Problem Formulation

- Define problem/question you want answers
- Specify research objectives

Start with the right questions

Research Plan

- Decide on
 - budget
 - data sources
 - research approach and instrument
 - sampling plan
 - research ethics

Determine how to get the answer

Data Collection

- Recruit field researchers and respondents
- Collect data from respondents

Ask the right people, in the right way

Data Analysis

- Clean the data
- Analyze data
 - Statistically
 - Subjectively
- Interpret data

Process, Analyze, Interpret data

Conclusion and Recommendation

- Present results
- Make action recommendations

Extract insight, and turn into suggestions

Step 1: Problem identification

- Executive vision
 - Cross-selling opportunities for LPG cylinder delivery
- Step1: Research Question
 - What products & services should the dealer sell?
 - Exploratory and descriptive research

Step 2: Research design

- Secondary Data
 - Product categories, manufacturer's price and retail price
- Primary Data
 - Qualitative data
 - Interview/Ethnography (salesperson, LPG dealers, users e.g. home, commercial)
 - Quantitative data
 - Survey (LPG dealers, users e.g. home, commercial)

Regions	Household		Commercial		Dealer	
	N	%	N	%	N	%
BKK	81	24%	32	20%	25	25%
Central / East	96	29%	33	20%	30	30%
North	51	15%	34	21%	15	15%
Northeast	51	15%	31	19%	15	15%
South	52	16%	34	21%	16	16%
Total	331		164		101	
Grand Total					596	

Step 3: Data collection

- Dealers
 - Problem: labor, capacity loaded, low margin
 - Opportunity: rice, water
- Commercial users
 - Problem: self or agent responsibility
 - Opportunity: cleaning the stove, maintenance for cost saving
- Home users
 - Problem: LPG store perception, prevalence of market and modern trade
 - Opportunity: cleaning, safety, repairing services, heavy products delivery

Step 4: Data Analysis (Qualitative)

3 cross-selling concepts derived from the interview

- Safe and save
 - Checking the gas system routinely could help save the gas costs
 - A user is concerned about the safety of the LPG as several LPG explosion were reported.
- Handy Man
 - It is difficult for users to find reliable handy man services
 - Cleaning the stove and gas stain, basic utilities i.e. “electric”, “water”, air conditioning”.
- Heavy Home Delivery
 - People today have a busy life so there is an opportunity to establish the service that delivers heavy, large, and bulky products i.e. rice, cooking oil, canned food and convenient food, drinking water

Step 4: Data analysis (Quantitative)

Step 5: Report findings

1.1 Define the problem and objectives

- What you try to learn from the research? The problem half-defined is half-solved
- **Look for marketing challenges/opportunities, possible environmental changes**
 - Maybe low brand awareness, declining sales and loyalty, low market share, new competitor enter the market, opportunity in emerging markets
- **Frame challenges as a question** a business want answers
 - How attractive is the premium coffee market? How can we enter this market?
 - Which segments should we target? What problems should we solve for customers?
 - What influence customers to buy? How likely will they buy our product?
 - How can we make our product more attractive than competitive product?
 - Why is sales/loyalty decreasing? What can we do to encourage customers to buy more?
- **Turn questions into objectives**
 - Research objectives are specific, measurable goals the decision maker seeks to achieve in conducting the marketing research
 - To determine factors influencing declining sales
 - To identify a target segment. To select the right product design for marketing.
 - To estimate if it is worth entering this market. To establish suitable mk programs

Problem may not be clear-cut at first

- Marketing managers **blamed sluggish sales on a lack of innovation in shoe polish**
 - They tried to conduct many consumer studies to understand how to improve its polish but no new product ideas clicked with consumers
- A new CEO realized that slow sales was due to the fact that today's footwear is made less from leather and need less polish
- They change the research objective: **to figure out what feet/footwear-related needs were not currently fulfilled.**
- A women's top priority is having comfortable, fresh-smelling shoes
- **Further research focusing on how to solve that problem**
 - Kiwi freshener, Kiwi Fresh'in (scented disposable insole)

1.2 Types of research objectives

Problem identification

Exploratory research

Gather background info to help clarify, define problem.

When you don't know much about the problem. Often used before other types

Findings are initial/tentative. I don't know why sales are dropping.

Example: **What frustrations with their current diets that drive people toward Keto?**

Method: Secondary data, pilot survey, Focus Groups, Interviews (Qualitative).

Descriptive research

Describe and measure phenomena, to answer who, what, when, where, how.

When your objective calls for more detailed data on a specific topic

Findings is conclusive. I know sales dropped but who stopped buying.

Example: **What consumer traits influence keto eating?"**

Method: Surveys, Big Data Analysis (Quantitative).

Causal research

To examine cause-effect relationship

If you want to understand the relationship between marketing factors.

Answer what-if question. **Will labeling a menu item 'Keto-Friendly' increase its sales?**

Method: Experiments, A/B Testing.

Problem solving

Research types?

- Company ABC wanted to assess how large the market for vegan cheese is in Canada. What is the potential market share for vegan cheese?
- Mobile phone company HTC wanted to understand how they could improve the user experience of their phones.
- Supermarket wants to study the impact of the nationwide plastic bag bans on consumer shopping behaviors

1.3 Information needed

- Translate research question/objective into specific information needed
- Red Bull decides to add a line of vitamin-enhanced water drink to leverage the strong brand position in the worldwide energy drink market
- Question: how consumers would react to a new drink under Red bull name? Whether and how Redbull should introduce the new product?
- Info required
 - Demographics, economic, lifestyle characteristics of customers --> *current Redbull customers? new segments?*
 - Usage pattern (benefit sought, usage occasion, favorite brands --> *Red Bull's strong positioning in the crowded market*
 - Customer/retailer reactions --> *sales of the new drink*
 - Market size --> *sales of the new drink and Red Bull's profit?*

2. Research Plan

Data types and sources

- Primary vs. secondary

Research methods

- Qualitative methods (interview, observation)
- Quantitative methods (survey, experiment)

Research instruments

- Interview guidelines/Survey questionnaires
- Depend on Research Objectives, Target profile, Data usage

Sampling plan

- Sampling unit
 - A segment of the population selected to represent the population as a whole
 - A representative sample is one that has all the important characteristics of the population from which it is drawn
- Sampling size
 - Qualitative: Exploratory research. 'How many' isn't the issue. Rule of thumb: 30
 - Quantitative: Descriptive and Causal research. Large samples are more accurate but cost more. Rule of thumb: 400
- Sampling procedure (probability vs. non-probability).
 - Probability sampling gives every member of the population a known chance of being selected. All are selected randomly.

Data Types: Secondary data

Use of existing research already collected for another purpose

Pro: less expensive, less time, a basis for primary data, hard-to-collect data

Con: irrelevant, obsolete

- Internal source
 - Internal Database
 - Sales records
 - Sales force activities
 - Inventory level
 - Financial statement
 - MK Cost reports
- External source
 - Government data/statistics
 - Media articles
 - Data science community
e.g. Kaggle
 - Google dataset search
 - Business
 - Research firm
 - Bank's research center
 - Network/Platform operator

Evaluating secondary data sources

Relevant	Fit the research project needs
Current	Up-to-date enough for current decisions
Reliable	How did they collect data? How many samples? Reliably and objectively collected and reported
Purpose	What is the purpose? Why did they conduct the study?
Authority	Who is the author? Are they reputable? Are they an expert?
