WHAT IS APACHE LICENSE

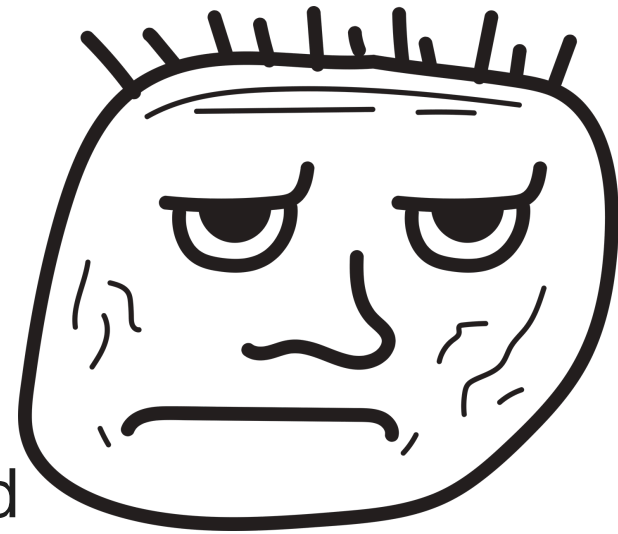

The Apache License is a highly popular, permissive free software license written by the Apache Software Foundation (ASF). It allows users to use, modify, and distribute software for any purpose, including commercial use, without having to pay royalties to the original creators.

HISTORY

The Apache License was born out of the early days of the World Wide Web, specifically to govern the collaborative development of the Apache HTTP Server.

Version 1.0 (1995): The original license was closely modeled after the original 4-clause BSD license. It included a mandatory advertising clause requiring any derivative works or documentation to mention the Apache Group.

Version 1.1 (2000): Created after the Berkeley Software Distribution (BSD) retired their advertising clause. Apache followed suit and updated the license so that derived products were no longer required to include attribution in advertising materials—only in the software documentation.

Version 2.0 (2004): The current and most widely used version. The Apache Software Foundation completely rewrote the license to depart from the BSD model. It removed the advertising clause entirely, clarified the rights to use derived products in closed-source projects, and added explicit patent rights and protections for users and contributors.

CONDITIONS

HOW TO USE
THIS LICENSE?

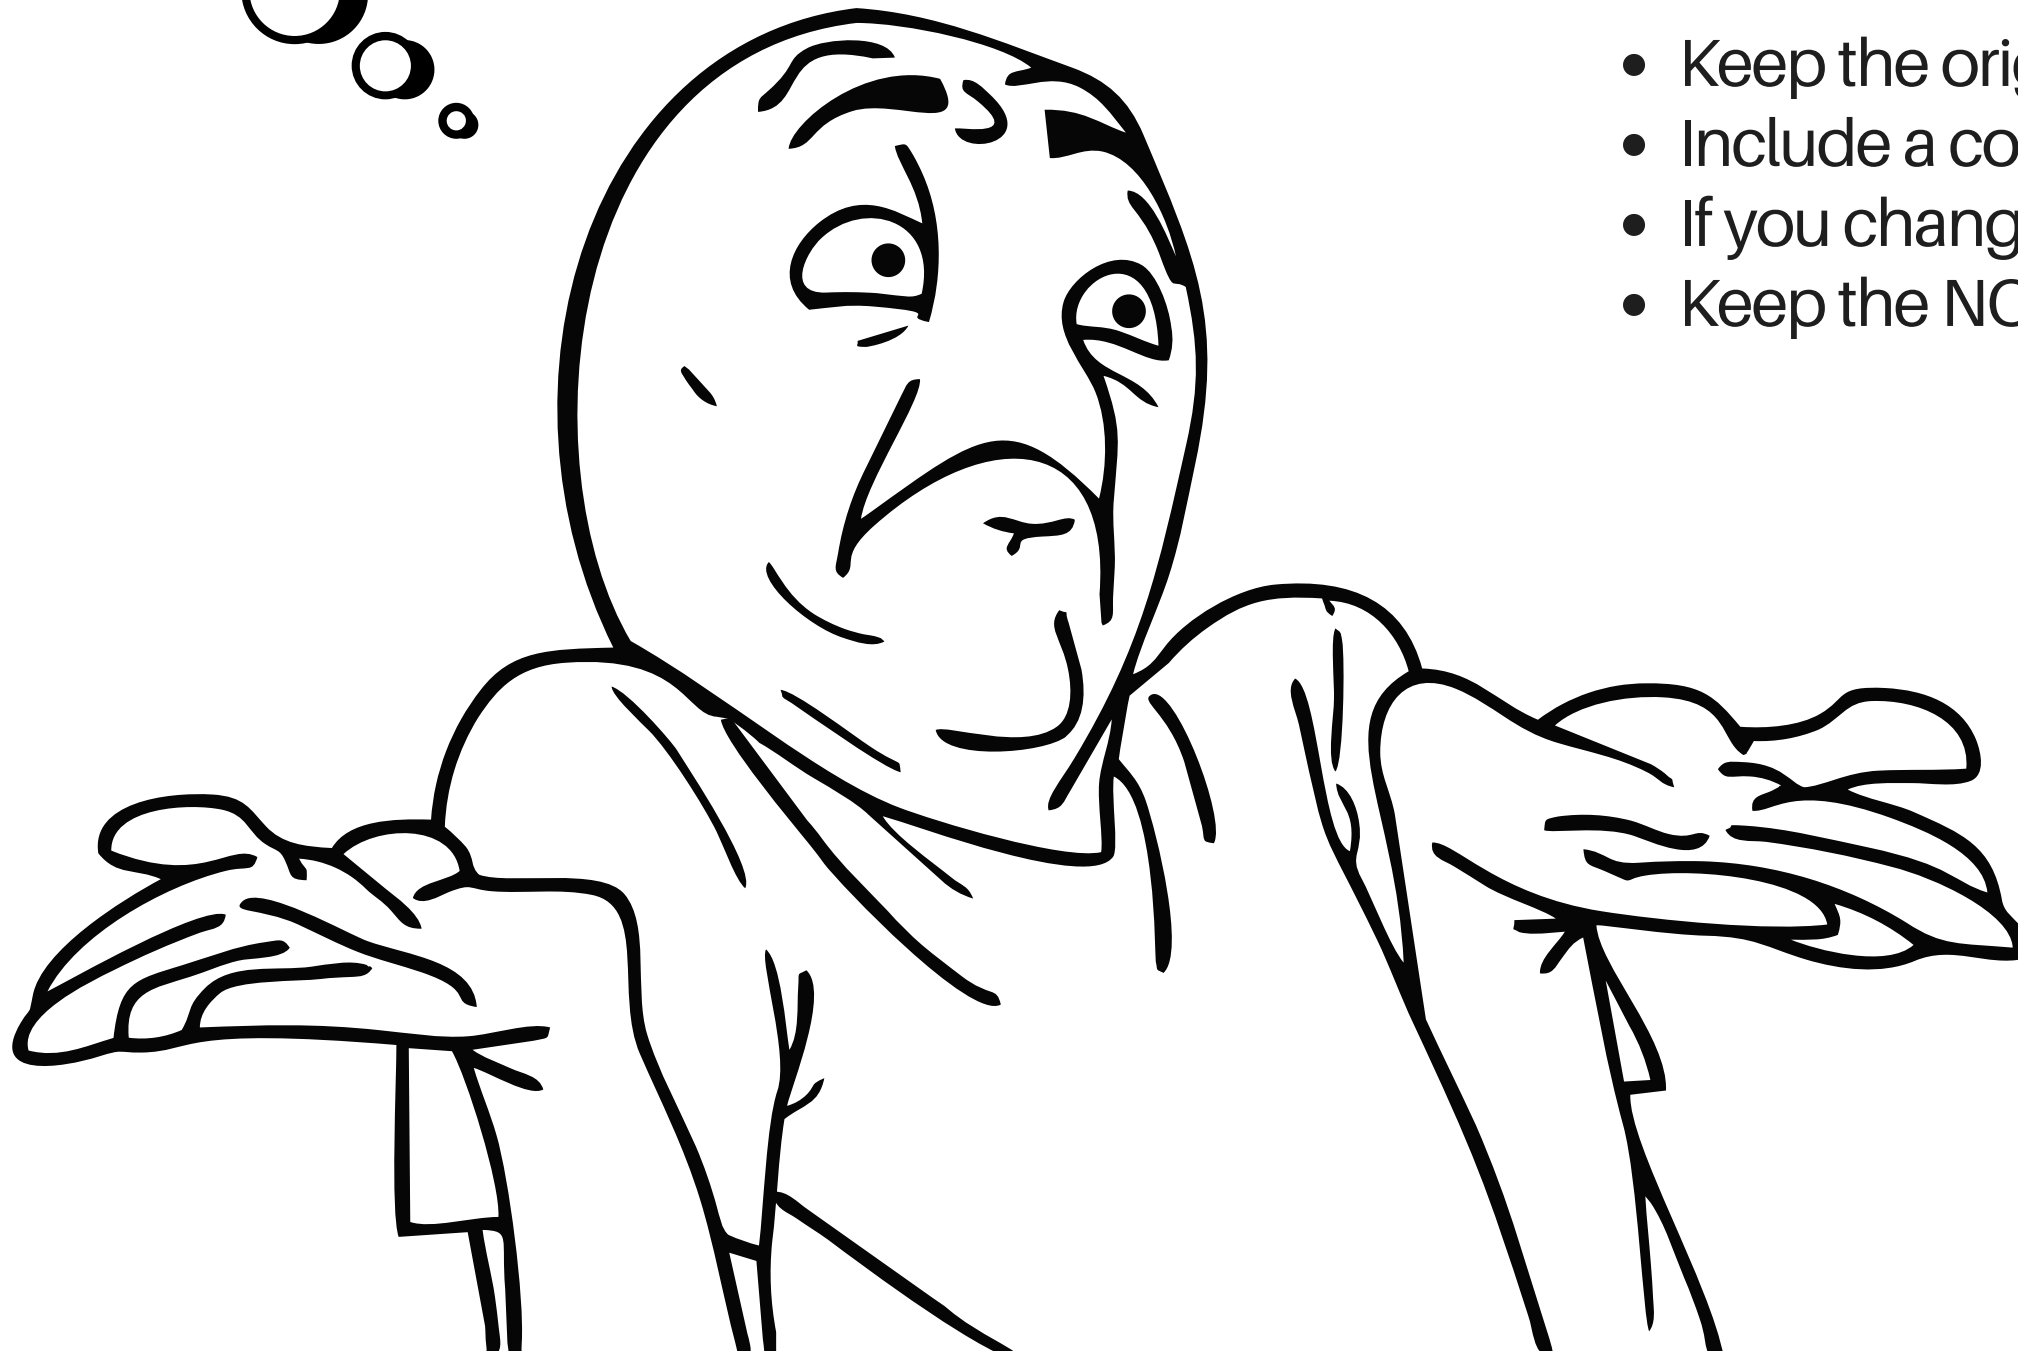

You MUST

- Keep the original author's name (copyright notice)
- Include a copy of the Apache License in your project
- If you changed any files, say that you changed them
- Keep the NOTICE file if the original had one

You CANNOT

- Remove the author's name
- Use the Apache trademark/brand
- Sue the original author
- Hold the author responsible if something breaks

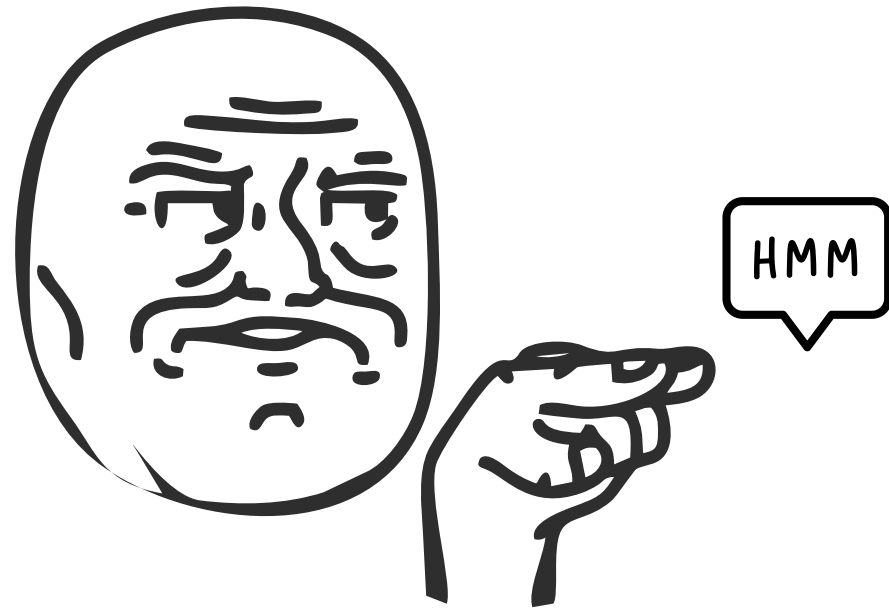

THE APACHE LICENSE 2.0 IS NOT COPY LEFT

WHAT IS APACHE 2.0? (PERMISSIVE)

TOTAL FREEDOM: YOU CAN MODIFY THE CODE AND PACKAGE IT DIRECTLY INTO A CLOSED-SOURCE PAID SOFTWARE.

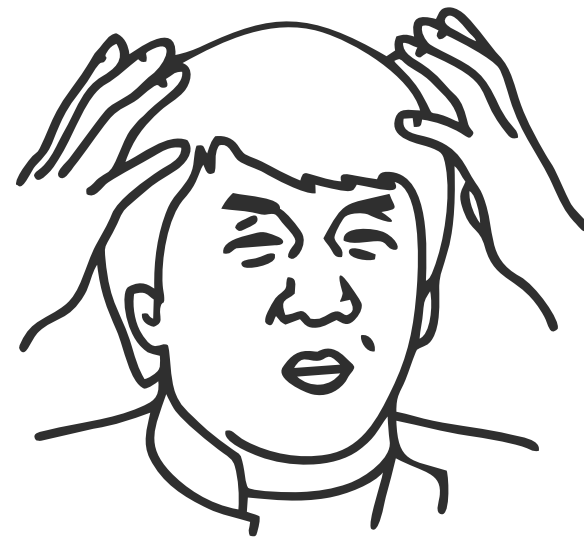

PATENT PEACE: CONTRIBUTORS AUTOMATICALLY GRANT PATENT RIGHTS, MEANING THEY CANNOT SUE YOU FOR PATENT CLAIMS LATER.

SIMPLE RULES: JUST RETAIN THE ORIGINAL COPYRIGHT NOTICE AND DON'T USE THEIR BRAND NAME TO MARKET YOUR APP.

I'M WATCHING...

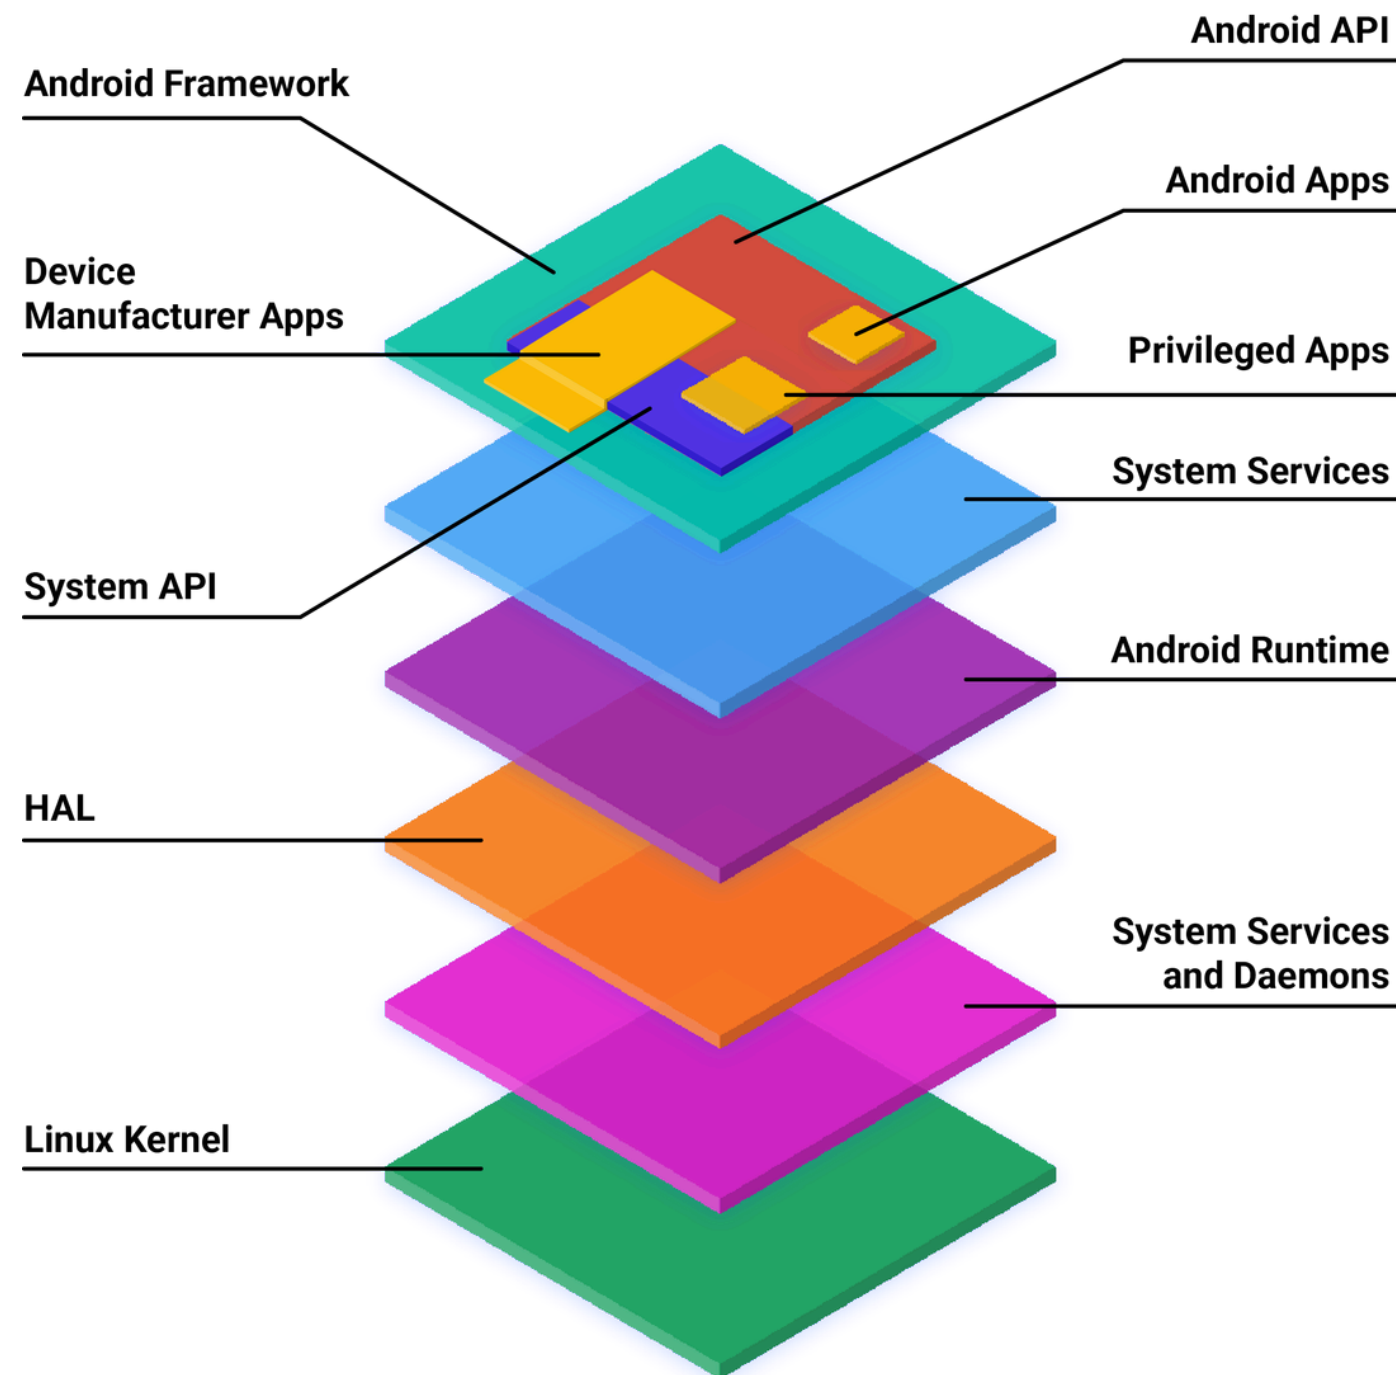

EXAMPLE

Android Open Source Project (AOSP) License under Apache 2.0

Why the Apache License works here: It is a permissive open-source license. It allows anyone to legally take the software, modify it, and use it commercially without being forced to make their own custom changes open-source.

Real World Impact : Tech giants like Samsung, Amazon, and Xiaomi can take the base Android code, build their own custom version of it

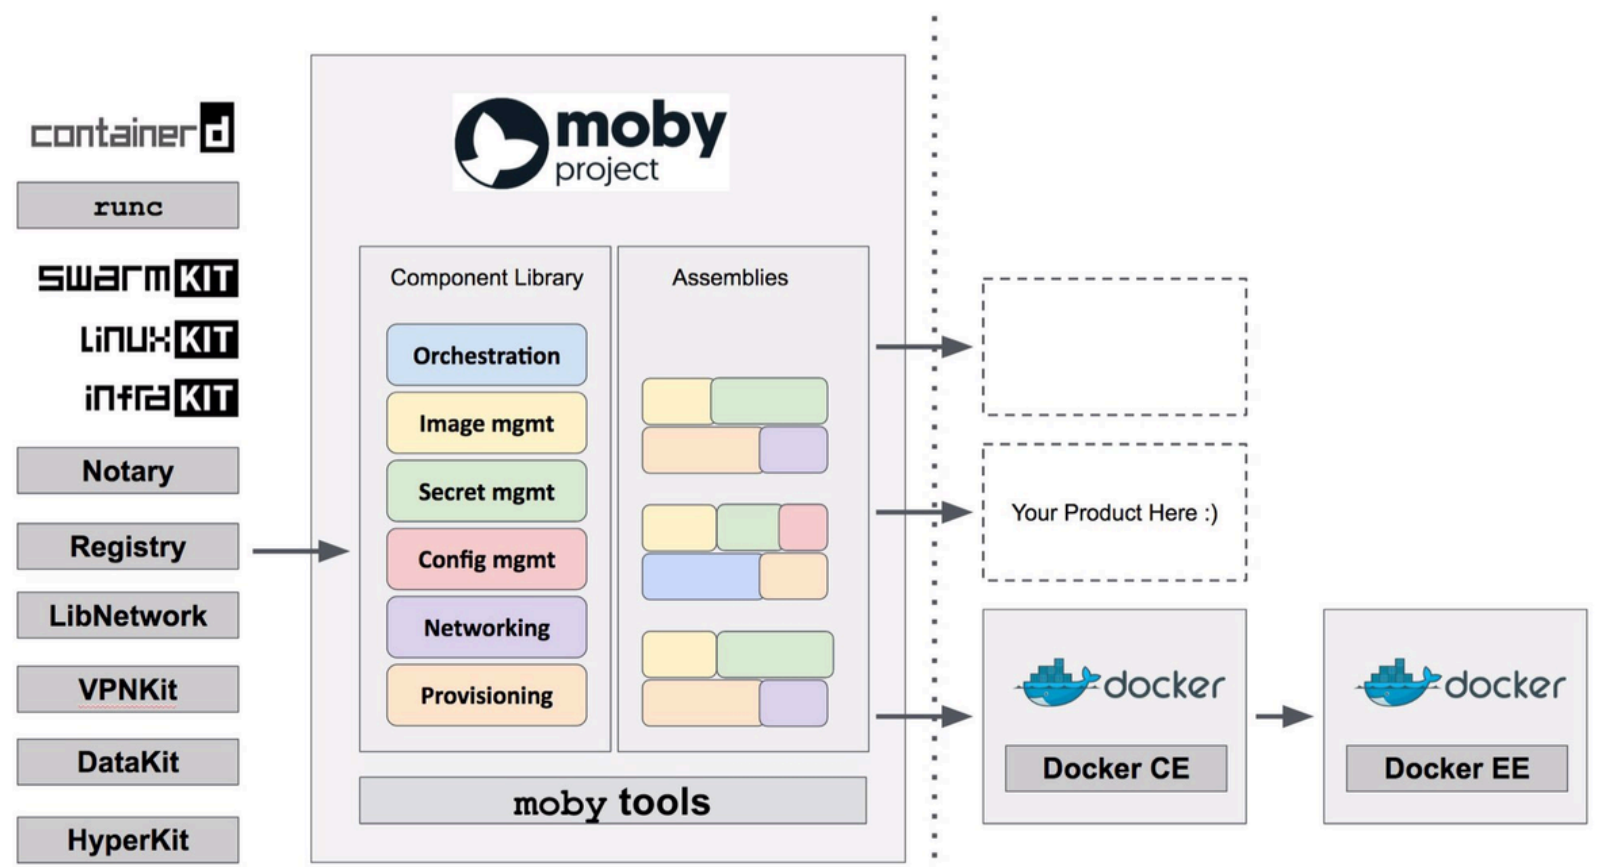

Docker(Moby Proj.)

An open framework for assembling specialized containers under Apache 2.0

Why Apache?

- Patent protection:
The license's strict retaliation clause prevents patent lawsuits
- Trademark defense: The code is free to use, but the original creator's trademark (Docker) is legally protected

Result:

Docker protects its own brand while still allowing others to build their own container. Additionally, the companies that use Moby cannot sue each other for patent

THANK
YOU!
