HISTORY

The MIT License, developed in the late 1980s at the Massachusetts Institute of Technology (MIT), has become one of the most widely used open-source licenses. Its creators aimed to craft a simple, permissive license to encourage collaboration and widespread adoption. It's known for empowering developers to modify, use, and distribute software for nearly any purpose with few restrictions.

KEY PRINCIPLES

01

Freedom and flexibility:
The MIT License lets you
use the software for any
objective—personal,
academic, or commercial—
with minimal rules.

02

Simplicity in legal terms:

Its concise language means that even those without legal expertise can understand their rights and responsibilities. Every time you use or share MIT-licensed code, you must include the original copyright notice and the license text. This lets everyone know who created the code and what the rules for using it are.

HOW TO USE

No official numbered versions.

The standard MIT License text is generally used without revisions.

To use:

Applying the License

Include the MIT License text in your project.

Add a copyright notice with the owner's name.

Distribute the license file (usually named LICENSE).

Copyright (c) 2026 John Doe

Permission is hereby granted, free of charge,
to any person obtaining a copy of this software...

ADVANTAGE

- Simple and easy to understand
- Allows commercial use
- Allows modification and redistribution
- Highly compatible with other licenses

DIS ADVANTAGES

Learn More

- Authors are not liable for damages or claims resulting from the software. (No warranty)
- Does not require improvements to be shared back
- Proprietary forks are allowed

MIT License

IS MIT A COPYLEFT LICENSE ?

No.

MIT is a permissive license, not a copyleft license. Developers can modify MIT-licensed software and release the modified version under a different license, including proprietary licenses. Source code disclosure is not required.

- Node.js (JavaScript runtime for building servers and web applications)
- Ruby on Rails (Framework for rapid web application development)
- jQuery (JavaScript library that simplifies web programming)
- React (Library for building interactive user interfaces)

SOFTWARE EXAMPLES

WHY THEY USE MIT LICENSE

Encourages adoption and contribution.
Allows commercial and non-commercial use.
Simple legal requirements.

CONCLUSION

- MIT License is a permissive open-source license.
- Requires only copyright and license notices.
- Does not enforce copyleft requirements.
- Widely used by major open-source projects because of its flexibility and simplicity.

THANK YOU
